EDUCATION

University of California, Santa Barbara *Santa Barbara, CA*

B.S. in Statistics & Data Science, B.A. in Economics | GPA: 3.84/4.0 | Dean's Honors *Sep 2022 – June 2026*

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Regression Analysis, Probability Theory

TECHNICAL SKILLS

Languages: Java, Python, SQL, R
Frameworks & Tools: Spring Boot, React, Git, PostgreSQL, AWS, Elasticsearch
Libraries: pandas, NumPy, scikit-learn, Jupyter

EXPERIENCE

Software Automation Intern, Risk Analytics | Orient Securities | Hong Kong *Jun – Aug 2024*

- Built **Python automation scripts** to scrape, clean, and refresh equity data for **200+ firms**, reducing update cycles by **40%** and improving monitoring efficiency.
- Implemented **forecasting and valuation workflows** in **VBA** and Excel using reusable functions and structured inputs, supporting ROI analysis and risk scenario planning for Pop Mart (9992.HK).
- Standardized IPO risk assessment datasets and generated structured risk outputs to support repeatable investment screening and research workflows.

Data Analyst / Developer | UCSB Daily Nexus | Santa Barbara, CA *Oct 2024 – Present*

- Led housing affordability analysis using **10 years of UCSB data**, building reusable **R-based analysis scripts** to process, model, and visualize long-term pricing trends.
- Developed interactive reporting workflows and visualization code for public-facing data stories reaching **20,000+ students**, improving consistency and reuse across analysis outputs.
- Integrated disparate datasets from university stakeholders and organized **5+ interviews** to improve data quality, reporting context, and technical accuracy.

PROJECTS

OnlineOrder: Spring Boot Food Ordering Web Application

- Built CRUD REST APIs with **Spring Boot** to support user registration, menu search, ordering, and checkout workflows across core customer interactions.
- Integrated **Spring Data JDBC** and repositories with **PostgreSQL** on **AWS RDS** to manage restaurant, menu, and order data through a structured backend data layer.
- Developed the frontend with **React** and **Ant Design**, enabling users to browse menus, manage carts, and place orders.
- Containerized the application and deployed it with **AWS ECR** and **AWS App Runner** to improve cloud accessibility.

SocialAI: AI-Based Social Network

- Built a social network web application frontend in **React**, supporting post creation and user interaction flows.
- Implemented token-based authentication flows for registration, login, and logout using **React Router** and **JWT-based** server-side authentication, while integrating **DALL·E 3**-assisted post generation and editing.
- Developed a scalable backend service in **Go** to manage post-related operations and deployed it to **Google App Engine**.
- Used **Elasticsearch** on **Google Compute Engine** to support search features, including recent-post lookup and personal-post listing at scale.

Clinical Risk Prediction Pipeline

- Built an end-to-end **machine learning pipeline** in **R** for heart failure risk prediction, including data cleaning, feature engineering, model training, and evaluation.
- Benchmarked multiple classifiers using **cross-validation** and comparative performance analysis.
- Achieved **90% prediction accuracy** with KNN and automated evaluation steps to improve reproducibility and streamline iteration.
